

ROOFING PROCESS

1

INSPECTION

Our qualified and experienced commercial representatives thoroughly inspect each roof using coring samples, water testing, thermal imaging, drone review, and pictometry. Creating a thorough assessment of each roof allows us to create a comprehensive plan to repair or replace.

2

ESTIMATE

With the thorough assessment we have performed in the field, our estimators can design a plan to fit your needs. Our team of experts will design your repair or replacement roof with quality and price at the top of our mind.

3

REVIEW

Once your estimate is ready our commercial team will present you with the estimate for your review. Some of our estimates will present multiple options to collaborate on the best course of action for your project.

4

EXECUTION

Once the estimate has been reviewed and approved, we turn your project over to our commercial installation team. We'll curate the entire process from ordering of materials to final inspection. Please note, ACV and deductible are due at material drop, with 50% of the retail price also due at that time.
